

Delivery Framework

The practical application of sustainable development will be achieved by addressing a range of priority environmental and social themes.

These will be integrated throughout:

- Robust industry sustainability criteria both international and national;
- National Policies;
- A dedicated Saudi sustainability support program;
- National awards and accreditations;
- First class education and training;
- Comprehensive research agenda;
- Tracking and reporting;
- Data gathering and story sharing.

Turning the principles of sustainable development into practical materials, relevant to golf and sustainability issues. We are structuring all our goals, benchmarks, guidance and recognition towards measurable action across four sustainability **Themes** for golf. This creates a custom built agenda for sustainability in and through golf specific to Saudi Arabia. The three main **Themes** are – **Fostering Nature**; **Conserving Resources**; **Supporting Communities**.

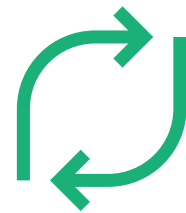

Climate Action is cross cutting throughout these themes, primarily through – emissions reduction in resource efficiency, renewable energy and supply chains; and maximum sequestration from courses through ecosystem regeneration and increased native diverse habitat cover.

FOSTERING NATURE

SUPPORTING COMMUNITIES

CONSERVING RESOURCES

Sustainable Golf in Saudi Themes

Fostering Nature

Maximise golf's positive impact in the conservation and enhancement of Saudi Arabia's ecosystems and biodiversity levels to deliver net positive outcomes.

Conserving Resources

Develop and showcase innovative practices to deliver low carbon solutions with minimal resource footprints.

Strengthening Community

Respect the culture and tradition of Saudi Arabia to maximise golf's direct and indirect value to society.

Climate Action

Contribute to the global challenge of climate breakdown through reducing carbon emissions; maximise carbon sequestration; credibly offsetting our usage; creating efficient supply chains and generating greater ecosystem services.
